

Project Management

Improve Project Efficiency, Visibility & Compliance

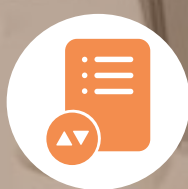

Is your strategic sourcing program moving so fast you can't keep it under control? There is an answer and it's not MS Excel. By using Scanmarket's Project Management capability, you will be able to handle all the "more" your organization is demanding from you.

"It has been paramount for us to use this Project Management approach in order to ensure we cover risks and have proper stakeholder alignment."

-Patrick Jonsson
Manager of Sourcing & Business Strategy- DT Group

- Powerful dashboard view of all projects - including search, filter and reporting functionality
- Flexible set-up of project templates with custom fields, savings, tracking and more
- Workflow management for tasks for all stakeholders and contract participants
- Storing notes, attachments and all project-related materials
- Customizable reminders
- Detailed audit log tracking all actions - ready for filtering and print
- Extensive Excel reports
- Integration of Supply Base Management, eRFx, eAuction and Contract Management processes
- Instant Quick Call support available to buyers, stakeholders and suppliers
- 23 languages supported by the software

Scanmarket

Scanmarket Project Management Key Benefits

- Higher project throughput and reduced cycle times
- Better visibility to project status. Single repository for all tasks related to a project
- Quick approvals, workflow and structured processes
- Notification of upcoming deadlines and delays
- Better compliance with established processes, templates and procedures
- Roadmap that is easy to follow from start to end.

Project Management Challenges

Much of the discussion in the strategic sourcing industry centers on how to drive “more”. More volume, more savings, more users, more categories. This is without question a good thing. It means improved savings, risk management, compliance and visibility for your organization and increases your value and influence.

However, as with anything there is a challenge. As your program ramps up, you will find it increasingly difficult to effectively manage all the activity. When you had one super user in one office with couple projects in flight, it was easy to keep track of everything. Now, with users and projects dispersed across multiple departments and geographies, you’ll need to find a way to make sure that everything stays on track and delivers the results you need.

Scanmarket Project Management helps you structure your procurement process, gain better visibility of sourcing projects, and provide you with a roadmap that is easy to follow from project start to end.

“In Group Sourcing (DT Group) we use an eight step Project Management Process for Sourcing Projects. We have had some very successful Sourcing Projects over the years resulting in a better bottom line. As such we have chosen to include Scanmarket’s Project Management Module in our License with them:

- Patrick Jonsson, Manager of Sourcing & Business Strategy at DT Group
